# Technical Standard Order

---

**Subject: TSO-C16 Amendment-1, AIRSPEED TUBES (ELECTRICALLY HEATED)**

This amendment forms a part of and should be attached to Technical Standard Order TSO-C16, dated September 1, 1948. The purpose in issuing this amendment is to amend the "Application" section of the Order.

Application. Airspeed tubes complying with the specifications appearing in this Order are hereby approved for all aircraft. Airspeed tubes already approved by the Administrator may continue to be installed by the aircraft manufacturer in production aircraft: -

- (1) for which an application for original type certificate is made prior to the effective date of this Order;
- (2) the prototype of which is flown within one year after the effective date of this Order;  
and
- (3) the prototype of which is not flown within one year after the effective date of this Order if due to causes beyond the applicant's control.

If an alteration or replacement involving a change in type or model of airspeed tube or if an original installation in an individual airplane is made within nine month after the effective date of this Order, previously approved types of airspeed tubes may be installed. However, in any such change or original installation made after the nine-month period, airspeed tubes installed shall meet the specifications contained herein unless the aircraft model is still in production and the installation is identical to the approved factory installation.

/S/ DONALD W. NYROP  
Administrator of Civil Aeronautics
